---

Executive Summary

Senior Ruby on Rails Engineer and Technical Leader with 6+ years of experience architecting and delivering enterprise-scale solutions. Expert in building high-performance distributed systems, leading cross-functional teams, and driving technical innovation. Proven track record of successful project deliveries.

Technical Proficiencies

- Languages: Ruby, JavaScript, Python, SQL, GraphQL
- Frameworks: Ruby on Rails, React, Vue2, Vue3, Expo, React Native, Hotwire, Stimulus, Node.js
- Databases: PostgreSQL, MySQL, Redis
- Cloud/DevOps: Heroku, AWS, Docker
- Architecture: Microservices, Service Objects, Event-Driven, RESTful APIs
- AI tools: Cursor, Claude Code, ChatGPT Codex, Github Copilot

EXPERIENCE

Lead Ruby on Rails Developer / Bump Brands (employed via Globaltize) 06/2025 - 05/2026

- Built and scaled the engineering team from the ground up, establishing hiring, onboarding, and development processes.
- Independently led end-to-end development of two core products from scratch, taking full ownership from ideation through architecture to launch-readiness stage.
- **Led technical direction for an 11-person cross-functional engineering team**, accelerating delivery through disciplined Agile planning and clearer ownership and accountability.
- Directed a team of developers in refactoring and modernizing an existing **React Native** social media application and **Ruby on Rails 7 API**, reducing technical debt while improving performance, maintainability, scalability and security.
- **Owned technical delivery** for Bump Connect, the company's flagship App Store social media app, leading Rails API execution and cross-functional engineering delivery from design handoff through production release for user-facing features.
- Led end-to-end **iOS deployment** and release management, handling certificates, provisioning profiles, TestFlight builds, and App Store review requirements.
- Built Boost It, an **Expo / React Native** + **Rails 7** platform for social media boosting and monetization, featuring App Store payments, in-app currency, wallets, campaigns, engagement tracking, analytics, admin tools.
- Built Kollabsy, a **RESTful Ruby on Rails 8 API** with a **Vue.js** frontend where Brands and Creators collaborate. Developed features including payments, wallet functionality, user profiles and search, live chat, onboarding, campaign creation, statistics dashboard, rewards, admin dashboard, Devise authentication, Sentry error monitoring, CanCanCan authorization, OAuth integrations.
- Introduced **Cursor Bugbot** to the team, cutting PR review time by 50%.

Senior Ruby on Rails Developer / Onward Development (project based) 06/2024 - 09/2024

- Led development of a secure **e-commerce** telehealth video conferencing platform using **Ruby on Rails 7, Hotwire, Stimulus, and Vonage**, enabling real-time doctor–patient consultations within a pharmacy application.
- Implemented **SMS OTP authentication** and session-level access controls to prevent unauthorized meeting access and strengthen consultation security.
- Managed **AWS EC2 deployment** and production configuration, supporting reliable delivery of telehealth services.

Senior Software Developer / Dashcam.io 06/2022 - 04/2023

- Contributed to 20+ code repositories and developer tools that amplified product visibility, strengthened developer adoption, and supported user acquisition.
- Partnered directly with the CEO to refine app functionality and user experience, translating product feedback into product improvements that improved engagement.
- Authored technical articles and engaged developer communities to expand online reach, build technical credibility, and increase awareness among target users.

Lead Software Developer / Post-PC Labs 01/2020 - 07/2021

- **Led technical direction for a 5+ engineer cross-functional team**, owning architecture, delivery strategy, and execution for a full-featured Q&A platform built with Ruby on Rails, Vue.js, GraphQL, and Twitter Bootstrap with custom theming.
- Led end-to-end development of a **Vue.js** based **Chrome extension** integrated with a **GraphQL Ruby on Rails API**.
- **Led the refactoring and modernization of a large legacy codebase**, reducing technical debt through **SOLID** design, **DRY** abstractions, caching, Sidekiq background processing, and clearer architectural boundaries; increased development efficiency by 60% and improved response/load times by up to 99%.
- **Led PostgreSQL performance optimization efforts**, diagnosing bottlenecks, restructuring tables, tuning indexes, and rewriting inefficient joins to deliver **70%+ faster query execution** and materially reduce database load.
- **Mentored and leveled up two engineers over 8 months**, providing architectural guidance, code review coaching, and engineering best practices that directly contributed to their promotions.
- **Established and enforced automated coding standards**, improving code consistency, reducing pull request friction, and raising overall engineering quality across the team.

Ruby on Rails Developer / Flux inc 06/2017 - 03/2019

- **Led development of 7+ production-grade Ruby on Rails applications**, building scalable backend systems and responsive frontends with **Vue.js and Angular**.
- **Delivered 4 custom e-commerce platforms** using **Ruby on Rails** and **Spree Commerce**, tailoring checkout, product, order, and admin workflows to business requirements.
- **Built a cross-platform iOS and Android application** with **Ionic** and a **Rails API**, enabling secure authentication, data access, and core business functionality.
- **Contributed to a legacy Ruby on Rails 4 medical densitometry application** that supported clinical workflows, improved domain-specific data management, and streamlined operational processes.
- **Managed production deployments and cloud infrastructure** across **AWS** and **Heroku**, supporting reliable application delivery and environment maintenance.
- **Integrated Postmark for transactional email delivery**, improving the reliability of system notifications and user-facing communications.

Ruby on Rails Developer / Custom Tattoo Design 06/2017 - 02/2018

- Owned the development of an end-to-end **job picker and assignment system** using **Bootstrap, jQuery, and DataTables**, allowing tattoo artists to browse customer requests, claim jobs, and manage assignments efficiently.
- Built a **real-time live chat feature** with **WebSockets, ActionCable, jQuery, and Bootstrap**, enabling seamless communication between tattoo artists and customers.
- Developed a **revenue statistics dashboard** that displayed monthly income statistics, giving tattoo artists and administrators clearer visibility into earnings and business performance.
- Contributed to a comprehensive **automated artist grading system** that calculated performance scores after task completion based on overall customer ratings, feedback and number of jobs taken.
- Led a major testing initiative by writing **200+ unit, integration, and feature tests** using **RSpec, Capybara, and Selenium**.
- Increased test coverage from **0% to 90% in one month**, reducing regression risk, improving application stability, and increasing confidence in production releases.
